

JSS MAHAVIDYAPEETHA
JSS UNIVERSITY, NOIDA

Second Semester, AY 2025-26
CIE-2

Subject Name: Web Development
Time: 1 hr.

Subject Code: MCA240
Max. Marks: 20

Course Outcomes:

- CO1: Understand fundamental concepts of web development and apply HTML/XML in web projects.
- CO2: Apply CSS techniques for designing, styling, and developing responsive web pages.
- CO3: Develop interactive web applications using JavaScript, AJAX, and networking concepts.
- CO4: Design and implement server-side applications using EJB, Node.js, RESTful APIs, and MongoDB.
- CO5: Implement web server functionality using Servlets and JSP for dynamic web content and session management.

PART A: ANSWER ANY ALL THE QUESTIONS Each question carries 1 marks 4Qx1=04			
Q	QUESTIONS	BL	CO
1	a What is the difference between IPv4 and IPv6?	2	3
	b Give brief description about Datagram.	1	3
	c What is the purpose of Node.js?	1	4
	d What is NPM?	2	4

PART B: ANSWER ALL THE QUESTIONS Each question carries 4 marks 3QX4=12			
Q	QUESTIONS	BL	CO
2	a Explain AJAX and its working with a simple example.	2	3
	OR		
3	b Discuss the working of Internet addressing and its significance.	2	3
	a Define TCP/IP client sockets and server sockets in Java networking.	3	3
4	b Illustrate the use of URL and URLConnection with suitable examples.	4	3
	a Design and explain the architecture of MongoDB with a neat diagram.	4	4
	OR		
	b Illustrate JSP architecture and demonstrate the use of different JSP elements.	3	4

PART C: ANSWER ANY 1 QUESTIONS Each question carries 4 marks 1Qx4=4			
Q	QUESTIONS	BL	CO
5	Demonstrate MongoDB insert, update, and delete operations with suitable examples.	3	4
6	A food delivery company wants to develop a fast and scalable web application to handle multiple customer orders and real-time tracking simultaneously. They selected Node.js for development. Explain the architecture and features of Node.js used in this system.	3	4

JSS UNIVERSITY, NOIDA

Second Semester, AY 2025-26

CIE-1

Subject Name: Web Development

Time: 1 hr.

Subject Code: MCA240

Max. Marks: 20

Course Outcomes:

CO1: Able to apply the knowledge of basic concepts of C Programming

CO2: Utilize structures pointers, dynamic memory allocation to enhance the functionality and efficiency of C programs and Apply the knowledge of basics of data structures

CO3: Apply the knowledge of various Linear and its Applications.

CO4: Analyze the various complex data structures like Hash table & linked list along with its applications

CO5: Illustrate classical algorithms and Non-linear data structures.

PART A: ANSWER ANY ALL THE QUESTIONS Each question carries 1 marks 4Qx1=04

Q	QUESTIONS	BL	CO
1	a Which tag is used to create an ordered and unordered list?	2	1
	b Give a brief description of TCP and HTTPS.	1	1
	c Which HTML tag is used to link an external CSS file?	1	2
	d Explain the concept of inline CSS.	2	2

PART B: ANSWER ALL THE QUESTIONS Each question carries 4 marks 3Qx4=12

Q	QUESTIONS	BL	CO
2	a Explain the concept of HTML tags and distinguish between paired and unpaired tags with suitable examples.	2	1
	OR		
3	b Define Web Development and explain its main components.	2	1
	OR		
3	a Elaborate the role of classes and IDs in CSS? Explain the difference.	3	1
	OR		
4	b Explain the structural and functional differences between HTML and XML with appropriate examples.	3	1
	OR		
4	a In what ways is a dynamic website different from a static website? Give examples.	4	2
	OR		
	b Illustrate the CSS Box Model with a suitable diagram	2	2

PART C: ANSWER ANY 1 QUESTIONS

Each question carries 4 marks

1Qx4=4

Q	QUESTIONS	BL	CO
5	A website has 10 webpages, and all pages must have the same font style. Which CSS approach will be most suitable? Explain your choice.	4	2
6	A website requires users to enter their name, email, and password and submit the information. Explain how HTML forms can be used to design this system. Mention the important tags used in form creation.	3	2
