

JSS MAHAVIDYAPEETHA
JSS University, Noida
CIE-I (AY 2026-27: Odd Semester)

Semester: III
Subject Name: Prompt Engineering
Date: 17-09-2026 | Time: 1 hour

Course: MCA
Subject Code: 25 MCA 344
Max. Marks: 20

COURSE OUTCOMES:

- CO1: Understand the Fundamentals of Large Language Models (LLMs).
CO2: Design clear, concise, and relevant prompts following the standard principles of prompt engineering.
CO3: Utilize LLMs to generate text and image for designing more effective content and design.
CO4: Design and generate engaging social media posts that resonate with specific audiences and fit platform guidelines.
CO5: Understand the principles of image generation with AI, especially through diffusion models, which convert textual prompts into detailed images.

PART A: ANSWER ALL THE QUESTIONS

Each question carries 1mark

4Qx1=04

Q	QUESTIONS	BL	CO
1	a Recall the neural network architecture that forms the foundation of modern Large Language Models such as GPT and Gemini.	1	CO1
	b A model is given the words "The capital of France is" and it produces the next word. Identify the category of model that performs this task.	2	CO1
	c List any two essential components of an LLM prompt.	1	CO2
	d A prompt begins with the line "You are an experienced financial advisor." Explain which prompting practice this line demonstrates.	2	CO2

PART B: ANSWER ALL THE QUESTIONS

Each question carries 4 marks

3QX4=12

Q	QUESTIONS	BL	CO
2	a A content team wants to use a text generation model to draft blog introductions. - Demonstrate how a text generation model produces text for this task. - Illustrate the complete process with one suitable example.	3	CO1
	OR		
3	b A software firm is evaluating Large Language Models for its customer-support product. - Apply a set of selection criteria to any four LLMs currently available in the market and identify the most suitable one for the firm. - Illustrate the stages in the evolution of language models that led to these systems.	3	CO1
	a An e-commerce company wants an LLM to write product descriptions for its website. - Apply the Five Principles of Prompting to construct one complete prompt for this task. - State each principle and show how your prompt satisfies it.	3	CO2
4	OR		
	b Consider the prompt: "Write something about marketing." - Analyze this prompt and identify the components that are missing. - Rewrite it as an effective prompt containing all essential components.	4	CO2
	a A college wants to use an LLM to draft notices for two different audiences: first-year students and senior faculty members. - Apply the practice of defining personality in prompts to write one prompt for each audience. - Explain how the defined personality changes the generated output.	3	CO2
	OR		
	b Analyze the "Mix and Match" strategy of combining prompt techniques for enhanced prompts. Explain, with one example, how combining two or more techniques produces a better result than using a single technique.	4	CO2

PART C: ANSWER ANY 1 QUESTION*

Each question carries 4 marks

1Qx4=4

Q	QUESTIONS	BL	CO
5	Trace the evolution of language models from early rule-based systems to present-day Large Language Models. • Differentiate between the key stages of this evolution in terms of their underlying approach. • Examine the limitations of each stage and analyze how the succeeding stage overcame them.	4	CO1
6	A startup deploys an LLM-based assistant, but users complain that its answers are inconsistent, occasionally incorrect, and often too long. • Analyze the challenges and limitations of using prompts that could explain this behaviour. • Examine the types of prompts that would be most suitable for this assistant. • Suggest, with justification, two changes to improve the prompts.	4	CO2
